

Directions: Take one tablespoon one to two times daily or as directed by your healthcare practitioner.

Medium-chain triglycerides (MCTs) are a special type of fatty acids which are metabolized more fully for energy in the body. Normal fats and oils contain long-chain fatty acids (LCTs). When compared to these fatty acids, MCTs are much shorter in length thus resembling carbohydrates more than fat. As a result, they are more quickly absorbed by the body and metabolized as fuel.* Because of this quick metabolism, the calories in MCTs are very efficiently converted into fuel for immediate use in the mitochondria, instead of being stored as fat.*

MCTs have been shown to enhance thermogenesis (heat production) in the body, thereby promoting the burning of fat.* MCTs contain fewer calories than LCTs, are metabolized quicker and actually contribute to an enhanced metabolism to burn even more calories!*

MCT Oil can also be used as a substitute for conventional oils in salad dressings, sauces or cooking as a source of beneficial fatty acids. It is not recommended for use in frying due to its low boiling point.

MCT Oil may cause a mild laxative effect.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

Caution: May cause a mild laxative effect. Keep out of reach of children.

Storage: Keep tightly closed in a cool, dry place.

This Formula Meets or Exceeds cGMP Quality Standards.
